

CREATE PROJECTS

Create projects for all of your clients

Each project will have its own work space

Create milestones & set deadlines for each project

Add multiple users to each project or simply work alone

Client has access to view progress of the project

PROJECT TASKS

Work more efficiently with todo lists [tasks]

Tasks can be categories into different milestones

Assign tasks to different members of your team

Each team member has access to their own tasks

Monitor task progress (on-time, behind, etc)

TIMERS

Every member in your team will have their own timer

Start and Stop your timer as you work

Timer can be manually reset or manually edited

Keep track on all the timers for each project

As the admin you can start and stop any users timers

INVOICING & BILLING

Create Invoices for each project

Option to allow full or partial invoice payments

Your clients will be able to view all their invoices in one place

Send invoices via email as attached PDF files

Clients can make online payment via Paypal for their invoices

Manually add payments against any invoice

TRACK BUGS

This application has a built in bug tracker

Your clients has report any bugs they find in their products

Resolving bugs is now easier allowing you to keep your clients happy

SUPPORT TICKETS

This application has a full featured support tickets/help desk section

Create different departments (sales/support etc)

Clients can submit tickets with file attachments

Assign tickets to different members of your team

Quickly view the current status of all the tickets in the system

TRACK PROGRESS

All projects come with a progress tracker

Tracker automatically updates as you complete the various tasks and milestones

Your client can easily see how well you are progressing from their own dashboard

COMMENTS – (PROJECT, FILES, TEAM)

The application allows you to communicate with your client about the project in general

Comments are also available on a file by file basis

You can also have private discussions with your team, which the client will not be able to view

PROJECT FILE MANAGER

The application has a built in AJAX file uploaded and file manager

Both you and your clients can upload files to a project

Easily see how many times a file has been downloaded

The built in commenting system allow you and your client to have a conversation about each file that has been uploaded.

WORK SOLO OR WORK WITH A TEAM

Whether you are an individual freelancer or you are a team of developers.

Advanced features allowing for team work or solo working

Multi-Level Group permissions allowing for drill down permission settings for various team members

BUILT WITH MVC CODING STANDARDS

We have ensured that our code is easy for only us to read and edit, but we have made sure it will be simple and easy to follow for you also.

Built on a solid Framework CODEIGNITER

Our design is 100% template based, meaning you could even edit the templates in a WYSIWYG editor like Dreamweaver.

Fully commented code..making it easy for you to make changes if you need to

EMAIL TEMPLATES EDITOR

All emails that are sent out by the system are based on HTML templates

The dashboard has a built in HTML editor allowing you to easily edit all the email templates
